Indiana University School of Informatics, IUPUI

Open Rank Tenure Track Faculty Position in Health Informatics

The Indiana University School of Informatics (Sol) at Indiana University Purdue University Indianapolis (IUPUI) invites applicants for an open rank tenure track appointment in Health Informatics to begin August 1, 2012.

Candidates for this position should be scientists interested in developing strong research programs and curriculum offerings in health informatics theory and methodology as it applies to healthcare, biology, and/or public health. The areas of particular interest include quantitative approaches to public health informatics, consumer health, translational informatics linking clinical and bioinformatics, and clinical informatics with an emphasis on clinical decision support and patient outcomes. The responsibilities of the position include teaching within the health informatics graduate program, mentoring students, supervising theses and dissertations, and conducting research that contributes and promotes health informatics.

The IUPUI campus, with over 30,000 students, is located on a large tract of land adjacent to downtown Indianapolis. Sol was founded 10 years ago and is the first completely new school in the United States devoted exclusively to Informatics and a range of sub-disciplines. Sol offers three Ph.D. programs (Health Informatics, Bioinformatics, and Human-Computer Interaction), four Master's programs (Health Informatics, Bioinformatics, Human-Computer Interaction, and Media Arts & Science), and three Baccalaureate programs (Informatics, Health Information Administration, and Media Arts & Science). Nearly 1,000 students are enrolled in the school's programs, with Sol faculty and students enjoying state-of-the-art facilities, including fully equipped classrooms, laboratories and offices in its brand new building. For information on the Indiana University School of Informatics, IUPUI, please see <http://www.informatics.iupui.edu>.

Sol is situated on the academic Medical Center Campus, home to the Indiana University School of Medicine, the second largest medical school in the US. During the FY 2009-10, the IUPUI campus was awarded \$400.34M for funded research, much of it in health and life science. Sol collaborates with the Regenstrief Institute, an internationally recognized informatics and healthcare research organization that has pioneered electronic medical records, computerized provider order entry, clinical decision support, regional health networks, and many of the data standards that drive them. Regenstrief Institute has the nation's only statewide electronic medical records system and presents a unique laboratory for all applications of health informatics. Candidates with a compatible research agenda will be able to participate in these research opportunities as collaborators, affiliates, or Regenstrief Investigators. The School strongly promotes research that is collaborative with colleagues from the life science disciplines within the School, as well as with faculty from other units on the IUPUI campus.

Sol also enjoys collaborative partnerships with the Roudebush VA Medical Center, Clarian Health (one of the largest health care organizations in the Midwest), the School of Nursing, as well as the Purdue Schools of Engineering and Technology and Science. In June 2009, *The Economist* stated, "Although every state wants to be a hub for life science, Indiana really is one." Indiana's comprehensive strengths and leadership in health and health information technology are promoted by BioCrossroads, a statewide initiative, which partners with research institutions, global companies, philanthropic organizations and government to advance growth and innovation.

Requirements for this appointment include a Ph.D., as well as a record of effective teaching and proven publication record. Candidates must have a clearly defined research agenda and must demonstrate the ability to create an externally funded research program, i.e., candidates must also be able to establish an independent team-based program with graduate students and seek funding to support them.

Candidates must also be able to facilitate interdisciplinary research, as well as pioneer collaborative relationships with faculty and programs across the IU School of Medical, the University, and nationally.

Rank is flexible and will depend upon the nature and depth of the candidate's qualifications and experience.

For additional information about the Indiana University School of Informatics, including degrees, course descriptions, plans of study and faculty research, please see <http://www.informatics.iupui.edu>.

Electronically submit a statement on your philosophy of teaching and research interests, curriculum vita, cover letter explaining your interest in this position, and names and contact information of three references to:

Teresa Stukey
Human Resources Coordinator
Email: informhr@iupui.edu

To ensure full consideration, please submit your materials by December 1, 2012.

The School of Informatics is eager to consider applications from women and people of color. Indiana University is an Affirmative Action/Equal Opportunity Employer.
